## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stinessen (5398762), and further in view of Grob et al. (6464469).
3. As concerns claim 1, Stinessen shows a sub-sea gas compressor module having a pressure housing (21) which comprises: an electric motor (8) and a compressor (3), drivably connected by at least one shaft (9 and 11); said compressor and motor being mutually isolated by at least one seal (17), thereby dividing said pressure housing into a first and a second compartment comprising the compressor and motor, respectively. Stinessen lacks to show at least one shaft is supported by magnetic bearings controlled by a control unit, said control unit being placed externally of said pressure housing, and connected to said magnetic bearings by means of wire connections or sub-sea mateable connectors. However, Grob et al. teaches the elements of claim 1 (5, 17 and 15a, b, c, d). One of ordinary skill in the art at the time the invention was made would have been motivated to modify the structure taught in Stinessen with the elements taught in Grob et al. because magnetic bearings are known to provide a more efficient means of supporting a shaft compared to oil-lubricated bearings.

4. As concerns claims 2 and 3, Stinessen shows wherein the pressure housing is oriented vertically, and wherein the motor is placed above the compressor, wherein the second compartment is located above the first compartment (column 5, lines 56+). Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made since the expected result of this configuration improves efficiency of the sub-sea gas compressor module design.

***Allowable Subject Matter***

5. Claims 4-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
